Thank you for taking the time to review the draft training products for the Review of the Drilling Operations Qualifications.

Inside this folder you will find the draft training products that are being updated as part of this project. This includes:

- Certificate II in Drilling Operations
- Certificate III in Drilling Operations
- Certificate IV in Drilling Operations
- Diploma in Drilling Operations
- Advanced Diploma in Drilling Management
- Associated units of competency for the Certificate II and the Certificate III
- Newly developed skill sets that align with water well licensing.

If you would like to, you can add comments throughout the documents where you have feedback on the draft training products. As you read through, please consider:

- Do the units provide the appropriate knowledge for a driller or offsider?
- Has steering and orientation been appropriately removed from the *conduct drilling* units now that it is a standalone unit?
- Is the entry requirement on the Certificate IV appropriate?
- Is the entry requirement on RIINHB310X Conduct surface directional drilling appropriate?
- Do you foresee any practical barriers to delivering or assessing these units?

Once you have completed your review, please send the edited drafts to us at tpi@ausmasa.org.au.
