

2 Pathways

The change to AURVTN120 is limited to a revision of the Performance Evidence only. No changes were made to the unit's elements, performance criteria, knowledge evidence, assessment conditions, or its placement within AUR32120 Certificate III in Automotive Body Repair Technology.

As a core unit within the qualification, the entry and exit pathways into and through the qualification remain unchanged.

Pathways were considered during the development activity. Given that the revision addresses an implementation issue – specifically, clarifying the number and configuration of panel replacements required for assessment – rather than altering the scope, content, or structure of the unit, no changes to existing qualification pathways were required or agreed by the Technical Advisory Group.

The revised Performance Evidence does not introduce new prerequisites, alter credit arrangements, or affect the unit's position within the qualification structure. Learners and RTOs can continue to engage with the qualification and this unit in the same way as prior to the amendment.
